ABSTRACT

The application of agroforestry in community forest management has been carried out for a long time in Indonesia. This study aims to determine the types of agroforestry plants, agroforestry patterns developed by the community in Lola Village, Oba Tengah Subdistrict, Tidore Islands City, and to find out the agroforestry system in Lola Village. Data were collected by means of interviews, observations, questionnaires and literature studies.The results showed thatThe application of the agroforestry system in Lola Village is a combination of forestry plants, plantations, fruit trees and food and horticultural crops.The cropping pattern that has been developed is a random cropping pattern and The agroforestry pattern applied is the Agrivilculture and Agrosilvopasture systems.

Keywords: Pattern, development, agroforestry, community
