Astini Ajaen, 2022 Factors Affecting Fishermen's Income in Saketa Village, Gane Barat District, South Halmahera Regency. (under the guidance of Yuliyana S. Kalengkongan, S.E., M.Si and Bakri Soamole, S.E., M.Si).

This study was conducted with the aim of analyzing and knowing the effect of working capital factors, working hours, fishing experience and selling prices on the income of fishermen in Saketa Village, Gane Barat District, South Halmahera Regency. The number of samples is 50 people from 150 fishing community populations with a simple random sample method. Data collection techniques were carried out by direct observation, interviews and documentation. The results of the study found that the working capital variable had a positive and insignificant effect on the income of fishermen, which means that for every additional working capital of 1 Rupiah, the income of fishermen will increase. The variable working hours has a positive and significant effect on the income of fishermen, which means that for every additional working hour of 1 Rupiah, the income of fishermen will increase. The fishing experience variable has a negative and significant effect on fishermen's income, which means that for every additional 1 Rupiah fishing experience, the fishermen's income will increase. While the selling price variable has a negative and significant effect on the income of fishermen in Saketa Village, Gane Barat District, South Halmahera Regency.
