ABSTRACT

Indra Hi. Abubakar[1], Bakri Soamole[2] and Daud Hasim[3] 2024*. Analysis of Economic Growth in South Halmahera Regency.*

Economic growth leads to effective and efficient economic development, so it is necessary to develop development in the field of factors that encourage economic growth, by achieving high economic growth, can prevent and control the level of inflation and stabilize foreign exchange rates. This study aims to determine how much inflation and poverty affect economic growth in South Halmahera Regency. the research used in this study is quantitative research. This method must also use computer software quantitative tools. The technique used in this research is the Multiple Linear Regression Analysis technique with the help of the SPSS version 27 program. There are three types of criteria in testing, including the determination coefficient test (R2), the statistical F test and the statistical T test.

Based on the research results, it can be seen that the inflation variable has a positive but insignificant effect, then the poverty variable has a positive and significant effect on economic growth in South Halmahera Regency. This can be seen in the results of the coefficient of determination (R-Square) of the dependent variable which can be explained by the independent variable of 84.3 percent. While the remaining 15.7 percent is influenced by other factors not included in this research.

Keywords: Inflation, Poverty and Economic Growth
