Skripsi ini membahas tentang persepsi masyarakat petani terhadap keberlanjutan pendidikan anak ke perguruan tinggi di Lingkungan Doyado Kelurahan Dowora Kecamatan Tidore Timur. Jenis penelitian yang digunakan adalah jenis penelitian kualitatif dengan analisis deskriptif merupakan sebuah metode penelitian yang memanfaatkan data kualitatif dan dijabarkan secara deskriptif, jenis analisis ini kerap digunakan untuk menganalisis kejadian, fenomena atau keadaan secara sosial. Hasil Penelitian diperoleh bahwa kesadaran masyarakat Doyado Kelurahan Dowora Kecamatan Tidore Timur yang besar akan pentingnya melanjutkan pendidikan anak, tanpa kita sadari bahwa orang tua siswa walaupun tidak ada pengetahuan yang luas, tapi cukup paham dan sadar tentang perkembangan jaman. Jadi segala bentuk bidang pekerjaan atau segala bentuk peran didalam kultur masyarakat harus di bekali dengan pengalaman dan ilmu pengetahuan. Adapun implikasi penelitian dari skripsi ini yakni, walaupun persepsi orang tua terhadap kelanjutan pendidikan anak ke perguruan tinggi sangat besar, akan tetapi pada kenyataannya jauh dari apa yang diharapkan, itu dapat terlihat dari masih adanya orang tua yang tidak berminat melanjutkan pendidikan anaknya ke perguruan tinggi. Oleh karena itu hendaknya orang tua selalu mendidik serta mengarahkan anaknya ke arah yang positif terutama memotivasi anak agar dapat melanjutkan pendidikan sampai ke jenjang pendidikan tinggi.

Kata Kunci : Persepsi Masyarakat Petani, Keberlanjutan Pendidikan Anak

ABSTRACT

Ani Tosofu, 2023 : Perceptions of Farming Communities on the Continuity of Children's Education in Higher Education in Doyado Village, Dowora Village, East Tidore District
Pembimbing : Dr. Ramdani Salam, S.Si., M.T. Dr. Eva Marthinu, S.Pd., M.Pd.

This thesis discusses the perceptions of the farming community towards the continuation of their children's education to tertiary institutions in Doyado Village, Dowora Subdistrict, East Tidore District. The type of research used is qualitative research with descriptive analysis, which is a research method that utilizes qualitative data and is described descriptively. This type of analysis is often used to analyze events, phenomena or situations socially. The results of the study showed that the awareness of the people of Doyado Village, Dowora Subdistrict, East Tidore Subdistrict, was great about the importance of continuing their children's education, without us realizing that even though students' parents did not have extensive knowledge, they understood enough and were aware of current developments. So all forms of work or all forms of roles in the culture of society must be equipped with experience and knowledge. The research implication of this thesis is that, although parents' perceptions of continuing their children's education to tertiary institutions are very large, in reality it is far from what is expected, it can be seen from the fact that there are still parents who are not interested in continuing their children's education to tertiary institutions. Therefore, parents should always educate and direct their children in a positive direction, especially motivating children to continue their education up to the higher education level.
